

## InternationalLanguage™ [PDF-Version](#)

A ShopFloorManager Module for International Language Management

You can Create, Modify, Save and or Import any Language or Dialect

Part of an Integrated Family of ShopFloorManager™ EventAware™ Modules

Supports Windows 8™, Windows 7™ & Windows™ XP including Support for Terminal Server 2003/2005/2008

InternationalLanguage™ is a ShopFloorManager Module Designed so a User of ShopFloorManager can Create, Modify, Save, Import and or Export any Language or Dialect of any Country. You don't have to recompile the changes as they are instantly available after modification.

InternationalLanguage provides the ability to have the Original Text Side by Side with the New Text so there is no confusion with the changes you are making! No matter what you can always go back to the original within minutes!

As an example you can change the name of any ShopFloorManager™ Menu to suit your tastes and the Language Management Module will save these changes to your local system so if you would like to create a whole new local Language and package the "New" Language so you can email this Language Version them back to CCI for inclusion into its future releases.

## InternationalLanguage™ For Creating a Local Dialect and or Modifying your Language Easily!

### Standard
